

DISCOVER AND **EXPLORE** what you will learn by participating in one of the following **CAREER PATHWAYS**:

Natural Resource Science Career Pathway

Prepares students with the knowledge and skills related to the biological, environmental, and economic importance of our renewable natural resources, environmental and wildlife science and management, forestry and rangeland science and management including the concepts of multiple-use and stewardship of our natural resources.

“In high school I had the opportunity to take many CTE classes. Through these classes I was able to find a passion and a home in agriculture. I was introduced to FFA which has improved myself as a person. My involvement in FFA through CTE classes allowed me to meet people and find a way to connect my family business with a college education and a lifetime engagement in agriculture.”
