

Getting Water from a Well

Long ago, people got water from a well. They made 10
a hole in the ground. They would dig until they found 21
water. 22

A place where they found water was called a well. 32
People lined the inside of the well with stones. They tied 43
a long rope to a pail. A pail is a type of bucket. They 57
dropped the pail down into the well. The pail filled with 68
water. 69

People pulled the pail of water up from the well. 79
They carried water into their homes. They used the 88
water for cooking and cleaning. 93
