MULTILINGUAL LEARNERS & EARLY LITERACY

Relationship Between Acadience Achievement and Achievement on Future Assessments

Acadience Reading benchmarks are empirically derived, criterion-referenced target scores that represent adequate reading skill for a particular grade and time of year. For students who score At or Above Benchmark, the overall likelihood of achieving subsequent reading benchmarks is approximately 70% to 99%. For students who score well below the benchmark, the overall likelihood of achieving subsequent reading benchmarks is approximately 10% to 20% (Acadience Learning, 2021).

Likelihood of Achieving Subsequent Reading Benchmarks Based on Acadience Achievement

Achievement of 1st-3rd Grade Multilingual Learners (MLL) on the Acadience Reading Assessment

On the 2021-2023 End of Year (EOY) Acadience Reading assessments for grades 1-3, 68% of non-MLL students reached or exceeded the benchmark, compared to 40% of MLL students. Moreover, 68% of non-MLL students achieved a typical or better pathway (pathways are a measure of growth relative to academic peers), while for MLL students it was 56%.

40% \geq Benchmark, Multilingual Learners

68% \geq Benchmark, Non-Multilingual Learners

Outliers in Early Literacy Among Multilingual Learners

It is vital to close the gaps in achievement and growth between non-MLL students and MLL students to reduce inequities in student outcomes. Some schools excel in MLL early literacy. ULEAD found 12 Utah schools that scored in the top 10% in EOY Acadience Reading benchmark percentage the past two academic years among grades 1-3 multilingual learners. Out of the 273 schools that were included in the analysis, these outliers were the only ones that showcased the highest performance on both administrations of the Acadience assessment.

Criteria Rationale

Why...

Focus on grades 1-3?

Early literacy has been identified as a priority topic by the Utah Legislature (S.B. 127).

Use Acadience as the data source? And Acadience Reading as the subject test?

Acadience Reading is a benchmark assessment that is administered three times per school year to Utah students in grades 1-3 and is the only statewide standardized reading test that measures students' reading abilities in the early elementary grades.

Use At or Above Benchmark as the measure for student achievement?

Benchmark equates to level of risk, and the focus here is on an at-risk student group. Benchmark is based on Reading Composite Score, which provides the best overall estimate of students' early literacy skills and reading proficiency (Acadience Learning, 2021). Furthermore, there are known probabilities of reaching future reading milestones depending on whether a student exceeds, meets, falls short of, or lags far behind an Acadience Reading benchmark.

Focus on multilingual learners?

For each grade level and subject area, MLLs are far behind non-MLLs in proficiency rates (U.S. Department of Education, 2019).
